Dr. Jamey Volker, Assistant Professional Researcher at Institute of Transportation Studies (ITS), University of California, Davis

Jamey Volker has nearly 15 years of professional experience at the intersection of transportation and land use, first as an environmental attorney and now as a professional researcher. His recent research focuses on estimating and reducing vehicle miles traveled from both land use projects and roadway capacity expansion projects (induced travel). For example, he co-developed and maintains the National Center for Sustainable Transportation's online induced travel calculator. Dr. Volker has also led multiple projects to better understand the implementation and effects of California's switch to using vehicle miles traveled rather than automobile level of service as the primary metric of transportation impacts under its environmental review law. He frequently advises local, state, and federal officials on these and related topics.
